

HOSPITAL MANAGEMENT SYSTEM

USER MANUAL

Prerequisites

1. Install XAMPP web server
2. Any Editor (Preferably visual studio Code)
3. Any web browser with latest version

Languages and Technologies used

1. HTML5/CSS3(formatting and styling)
2. JavaScript (to create dynamically updating content)
3. Bootstrap (An HTML, CSS, and JS library)
4. XAMPP (To create a localhost server)
5. Php (used as a scripting language)
6. MySQL (An RDBMS that uses SQL)
7. TCPDF (to generate PDFs)

Steps to run the project in your machine

1. Download and install XAMPP in your machine
3. Copy the hospital folder from the disk to the 'htdocs' folder of your XAMPP directory.
4. Start the Apache and Mysql services in your XAMPP control panel.
5. Open your web browser and type 'localhost/phpmyadmin'
6. In phpmyadmin page, create a new database from the left panel and name it as 'myhmsdb'
7. Import the file 'myhmsdb.sql' from the hospital directory to your newly created database and click import.
8. Open a new tab and type 'localhost/hospital' in the url of your browser
